Amelia,
Sorry I was away when you called. Didn't check your message yet, but responding to just this email for now.

Good question.

Water quality standards themselves do reflect the limits where applicable (basically below Hoover Dam if I remember correctly).

In general the Salinity standards, per crb salinity control forum , have a limitation (more like an allowance?) of 1 ton/day for new sources/new dischargers.

POTWs have an incremental (net basis) of 400 mg/l allowance?; and yes, the groundwater discharges do have special consideration as well.

I was never able to figure out which rule supersedes which (between our State WQSs/ anti-deg policy (or lack of it -- especially in the context of background water quality considerations and 'natural destinations') & crb WQS related document, as crb in itself is a legal as in EPA approved/regulatory entity).

Before I go to our BWQP, are you available for quick call? I wanted to get reasonable clarity from you regarding a tentative solution I have in mind (now that you called this out too ☺) which could help us all out of this TDS pickle.

Thanks

sharada

Hi Sharada,

Thanks for your clarifications on this permit so far. I just finished reviewing, and have one more question for you (which I also just left you a voicemail about): have you talked to your BWQP colleagues about the applicability of the beneficial use standard for TDS under NAC 445A.2156 vs. what's specified in the Colorado River Salinity Forum (2008 Review, <http://www.crb.ca.gov/Salinity/2008/2008%20Review.pdf>)? Specifically, see "Policy for Implementation of Colorado River Salinity Standards Through the NPDES Permit Program for Intercepted Ground Water" in that link, starting on p. B-18. I'd be interested to hear if BWQP has any clarification on if/how this applies to discharges of intercepted groundwater to the Las Vegas Wash.

Please let me know if you find out anything on this, or if you have further questions.

Best,

Amelia Whitson

With typo stress reduced and at least one un-resolved staff comment.

Good morning Amelia.

Please find attached the draft1 documents for our review for a new NPDES permit proposed for City of Las Vegas for their Boulder Highway Storm Drain Installation Project.

The permittee has asked to revise the due dates for the SOC Items to reflect their project logistics (at present they haven't identified an operator yet hence do not have date estimations). Will keep you posted once I hear back from them what they would like to propose instead.

Thanks
